"The Energy, Jobs & the Economy workshop was very informative. I learned about the advanced energy industry in Arkansas which was helpful to me when considering relevant legislation during the 2013 session. This is an important sector of the Arkansas economy that continues to grow and create jobs so I highly recommend that 2014 candidates find the time to attend one of this year's workshops."

Arkansas House District 51 (West Memphis)

WALTON OUTREACH
APPLIED SUSTAINABILITY CENTER

Energy, Jobs and the Economy

A Workshop

For

Candidates and Elected Officials Of the Arkansas Legislature

Highlights of the EJE

Workshop include:

- *Energy efficiency policies that are creating jobs and freeing up consumer dollars to reinvest in local economies.*
- *New developments in renewable energy sectors that attract new business and manufacturing to Arkansas.*
- *How Arkansas-based resources can be utilized to meet a greater proportion of our state's energy needs, keep more energy dollars at home, and give consumers more choices for their energy needs.*
- *Important ways that Arkansas is expanding biofuels and compressed natural gas as alternative fuels.*

"The Energy, Jobs and the Economy workshop gave me a chance to learn more about Arkansas' energy resources and how these resources can keep Arkansas competitive. Hearing from the job creators, the business people who work in the advanced energy sector, gave me insight on policy ideas that can grow business, create jobs, and save energy. I absolutely recommend the workshop to candidates in 2014."

"Energy is an ever evolving industry that impacts our lives on many levels. It is extremely important that elected officials be informed in order to support smart policy for Arkansas' future. Energy, Jobs and the Economy workshops offer excellent, practical, up-to-date material to position Arkansas to be on the energy cutting edge."
